

Dear Editor,

Please find attached our manuscript titled “Guided Differentiable Glimpse Attention for Efficient Visual Recognition” for consideration for publication in your journal.

This work presents a lightweight attention-based image classification framework that replaces reinforcement-learning-based glimpse selection with a fully differentiable attention mechanism. The proposed approach is designed to simplify training while still allowing the model to learn meaningful spatial focus during image classification. The study includes experimental evaluation on the CIFAR-10 dataset along with performance analysis using multiple evaluation metrics and confusion matrix analysis.

This manuscript is original, has not been published previously, and is not under consideration for publication elsewhere.

We believe the work fits within the scope of the journal because it focuses on deep learning, visual attention mechanisms, and efficient image recognition methods.

Thank you for your time and consideration. We appreciate the opportunity to submit our work and look forward to your response.

Sincerely,

Himanshu Dwivedi

Lecturer in Computer Science, Directorate of Education, Delhi Govt.
